

For law enforcement, financial institutions, merchants & security staff

MSR999 is a portable device for payment card verification anywhere without the need for computer or network connectivity.

It has unique firmware which reads financial payment cards (e.g. credit / debit) and displays all the card data including card scheme (Visa® / MasterCard® etc).

This data can be visually checked against the data physically embossed / printed on the card.

Payment card verifier is for the verification of payment cards data only. It does not store any data, so can never be used as a skimmer.

The portable payment card verifier has a backlit LCD screen for use in low light.

It also has a battery low indicator and an auto-off feature to preserve battery life.

- Compact and portable (L58 X W20 X H47 mm).
- No network connection or installation required.
- Battery: Single-cell Size AAA 1.5V DC battery.
- Can be powered from a USB Cable: DC5V, 200mA.
- Provided with lanyard.

Swipe...

Simply swipe the payment card through the payment card verifier.

Specifically designed firmware decodes all magnetic stripe data and displays user friendly text on screen.

Check...

Quickly and easily compare the data on screen with the physically printed / embossed information on the card.

Payment card verifier displays the card number, expiry date, cardholder name & card scheme. It also specifies if a chip is present on the card.

Process...

If the card data doesn't match the physical card information then the card is fraudulent.

Retailers can deny the transaction.
Law enforcement / security staff can apprehend the suspect.
